Special Report No. 36

April 6, 1925

ADDITIONAL DEVELOPMENTS ON THE
ARMY CUTWORM (Euxoa auxiliaris Grote)

Under date of March 31, Prof. M. H. Swenk of Nebraska, reports as follows:

"Since writing you on March 26, additional developments concerning the outbreak of the army cutworm (Euxoa auxiliaris) have come to my attention especially in the increase of the affected area toward the southeast, into Cheyenne, Deuel and Perkins Counties. On March 28 the county agent of Cheyenne County reported that there were three distinct outbreaks of these cutworms in that county and that at several places they were devouring the winter wheat, in spite of the heavy frosts nearly every night. A telegram received today indicates that these worms are destroying the wheat in Deuel County north of Julesburg, Colorado. On March 26 the county agent of Perkins County reported alfalfa fields heavily infested and the cutworms moving into armies, and by March 30 the worms had become so destructive in that county that one of the citizens appealed to the governor for aid, stating that the worms were taking most of the winter wheat in that vicinity. I also have information that this outbreak extends well down into northwestern Kansas."

Special Report No. 35

REPORT OF THE
SPECIAL AGENT IN CHARGE

Under date of March 31, 1935, Mr. M. M. Smith of Denver, Colorado, advised as follows:

Follows:

"Since visiting you on March 7, I have received information concerning

the outbreak of the first epidemic (cholera) in the State of Colorado, and I am

especially in the interest of the citizens of the State, and the health of the

citizens, I am reporting to you the following information. On March 25, the county agent of Colorado

County reported that there were three distinct outbreaks of these epidemics

in that county, and that at several places there were a number of deaths. The winter wheat

in parts of the county is nearly every day, and a large number of people

indicated that these wheat are destroyed, and wheat in Teller County north of

Leadville, Colorado. On March 25, the county agent of Park County reported

that the wheat is heavily infested and the outworn covering into wheat, and of

which the wheat has become so destructive in that county that one of the

citizens appealed to the Governor for aid, stating that the wheat was being

lost of the winter wheat in that vicinity. I also have information that this

outbreak extends well down into northwestern Kansas."
